

WHAT'S *YOUR* QUESTION?

In all affairs it's a healthy thing now and then to hang a question mark on the things you have long taken for granted.

—Bertrand Arthur William Russell—

With 20 years of engineering partnerships in aeronautics, transportation, and material technology industries, Calmar Research Corporation thrives on solving design and design-process-management questions.

Imagine having a staff with the capacity to work on aircraft designs one month, to design new efficiencies in highway transportation three months later, then to focus attention on creating safer surgical sharps. Calmar Research Corporation offers that kind of power. Calmar's strength is in its flexibility... in its ability to leverage solutions to one industry's needs for application in another field.

This ability puts Calmar on the leading edge of important engineering developments. Some examples...

- ❖ Calmar's proven experience in design-process management led Boeing Commercial Aircraft Group to select (2003) Calmar Research Corporation to market—for the first time—its legendary AGPS geometry software. Now designers with new ideas can seamlessly mesh with industry partners by designing and sharing within the same design environment.
- ❖ Long-term activity in the design of heavy trucks in North America for years has earned Calmar the trust of that industry's chief engineers, who seek to apply the aerospace industry's practices to the design of long-haul trucks.
- ❖ Innovative teaming with commercial transport industry OEMs to adapt state-of-the-art automotive telematics technologies for better asset management and profitability.
- ❖ Research in structural and materials engineering has led to development of an R-20 insulating concrete block.
- ❖ Exploring the challenge of accident-proofing syringes has led to a patent for a mechanical logic technology that provides programmed protection from sharp instruments in the medical industry.

"It is not the answer that enlightens, but the question," claimed playwright Eugene Ionesco. Calmar Research Corporation will help your organization ask the right questions today... and seek out tomorrow's best answers.

Now... What's *your* question?
